

TAbic® IBVAR206

Global Leading vaccine against the **Infectious Bronchitis IS/1494/06 field virus** (Variant 2 group)

TAbic®IBVAR206 is a live Infectious Bronchitis (IB) vaccine, attenuated from the IS/1494/06 strain of the variant 2 group (Genotype group GI-23).

TAbic®IBVAR206 offers the best protection in class against the GI-23 group of field viruses. Over the last 11 years, more than 11 billion birds have been vaccinated around the world.

When facing an Infectious Bronchitis challenge, don't take chances; contact Phibro, the Global leader in IB GI-23 control!

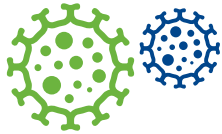

Visit: <https://www.pahc.com> to learn more and contact your local Phibro representative to place your order today!

The Variant 2 (GI-23) field viruses are known for their ability to evade the protection induced by other bronchitis vaccine strains such as the 793-B, QX, or D-274 among others. This is regardless of whether these vaccines are applied by themselves, or when combined with a Massachusetts or H-120 strain.

Isolated in Israel (2006), the IS/1494/06 pathogenic strain has spread to at least 31 countries including the Middle East, the Gulf States, Turkey, Iran, Eastern and Western Europe, and African countries including South Africa where the field virus was identified in 2018.

TAbic® IBVAR206

TAbic® IBVAR206 is the worldwide leading bronchitis 2-06 vaccine

Attenuated from the IS/1494/06 field strain.

Produced at Phibro's EU GMP certified site.

TAbic® IBVAR206 is eco-friendly. The freeze-dried effervescent tablets sealed in aluminum blister packs reduce waste, storage space, and transportation costs.

Experienced Technical Service support. Expertise in controlling Variant IB strains in the field for more than 11 years.

TAbic® IBVAR206 is licensed in Europe, including Poland as a Reference Member State (RMS), and six other European Concerned Member States (CMS).

Phibro has safety and efficacy information to back up the vaccine's indication in laying hens, broilers and breeders.
